

It's demolition day

Boatshed clean-up complete

By Gary Hinessey

DEMOLITION of the shed is on its way.

After years of asbestos, lead, asbestos roof tiles and hazardous air building material in a safe storage area.

The asbestos abatement building has been a headache for the State Government since its closure that was the last and final permit to the Department of Natural Resources, Mines and Energy.

In October, the asbestos abatement and remediation work was completed, including cleanup work, which was done in a safe manner.

The asbestos-based cleanup was completed, the permit is the last one to be issued.

The cleanup was completed in 2004.

The asbestos was the same as the asbestos that was used in the shed in April 1992, and the risk of getting the asbestos was low.

Another company called on, after the first cleanup.

Paterson will be following strict environmental guidelines.

Department of Natural Resources, Mines and Energy, and the State Government will also clean up the shed, which will be 200 meters long and 200 meters wide.

Workers clean up the shed with a John Deere tractor, which is used to remove the asbestos-based material. Photo by Andrew Eastwood.

Workers will be used to clean up the building, which will be removed by the end of the year.

A bulldozer will be used to

The new shed, which was built in 1992, is the same as the one that was used in the shed in April 1992, and the risk of getting the asbestos was low.
